## CLEANING WITH OZONE WATER

At Hotel Okura Amsterdam we use the Lotus Pro cleaning concept, a system that converts cold tap water into Ozone water. The stabilised Ozone water has a purifying effect of 24 hours, after which it returns to its original state: oxygen and water. In addition, Ozone water is the most powerful natural cleaning product to eliminate dirt, stains and other germs. In this way, daily cleaning chemicals can be replaced by a completely sustainable cleaning product. Ozone water has a sanitising effect and is not considered to be a disinfectant.

### How does Lotus Pro work?

The cleaning concept consists of two system components. The stabilisation module is connected to the cold tap water. All chalk and minerals are filtered out of the water within the stabilisation module. The stabilised water ends up in the High Capacity Unit. The High Capacity Unit filters the oxygen from the air with the use of electricity and converts it into Ozone. The Ozone is added to the stabilised water and is then ready for use.

### Benefits of Ozone water

- Research shows that Ozone water removes 99.9% of viruses and germs.
- The Lotus Pro cleaning concept replaces all daily cleaning chemicals by converting cold tap water into Ozone water. The system therefore ensures that fewer cleaning chemicals and less polluted water disappear into the sewage system.
- Lotus Pro cleaning concept scores 0-0-0-A on the MSDS (Material Safety Data Sheet), which means that it is safe for human use in any form. In short; it will not cause any allergies or skin irritations.
- The product is safe during and after use.
- No exposure to chemicals for both workers and guests.
- The product is harmless to nature when flushing it out.
- The product promotes a healthier working environment.
- The product reduces the ecological footprint and contributes to a better and greener environment.
- The product is recyclable.
